```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="phoslip; Region: Phospholipase A2. Phospholipase A2 releases fatty acids from the second carbon group of glycerol. Perhaps the best known members are secreted snake venoms, but also found in secreted pancreatic and membrane-associated forms. Structure is all-alpha, with two core disulfide-linked helices and a calcium-binding loop. This alignment represents the major family of PLA2s. A second minor family, defined by the honeybee venom PLA2 PDB:IPOC and related sequences from Gila monsters (Heloderma), is not recognized. This minor family different elsewhere:

on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chrl RPI-169023 is from the library RPCI-1 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. For further details see http://bacpac.med.buffalo.edu/
                                                                                                                                                                                                                                                                                                                                                     IMPORTANT: This sequence is not the entire insert of clone RPI-169023 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true left end of clone RPI-169023 is at 1 in this sequence. The true left end of clone RPI-340NI is at 98644 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          note="L1MC4 repeat: matches 6189. .6548 of consensus"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              781. .909

or Aug 14, 2000 this sequence version replaced gi:9714699.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation amnotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequence map criteria annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORWPEP; Information

The present sequence is the coding sequence of human phospholipase 1

(HPPLI). The protein produced from this sequence is involved in the hydrolysis of membrane phospholipids. The protein and its coding sequence to hydrolysis of membrane phospholipids. The protein and its coding sequence can be used to diagnose and treat the following: cancers such as prostate, breast and testicular cancers, autoimmune and inflammatory disorders such as ALDS, allergies, anaemia, asthma, atherosclerosis, crohn's disease, diabetes mellitus, emphysema, Graves' disease, irritable commatoid arthritis and systemic lupus erythematosus, infection caused by viruses, fungi, bacteria, parasites and protozoa, and reproductive disorders including infertility, disruptions of the menstrual cycle, polycystic ovary syndrome, ectopic pregnancies, disruptions of spermatogenesis, cancers within the reproductive tract and impotence. This coding sequence was obtained from clone no.2641779, which was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AGTGACTGGGAAAATGCCCATCCTCTACTGGCCCTACGGCTGTCACTGCGGACTAGG 180

Human secretory phospholipase A2 (PLA2) and its encoded gene for diagnosis and treatment of secretory PLA2-associated diseases e.g. septic shock, trauma, pancreatitis, allergic rhinitis and chronic rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes human secretory phospholipase A2 (PLA2). PLA2 has antiallergic, antiinflammatory, antibacterial, tranquillser, immunosuppressive, vulnerary, antirheumatic and antiarthritic activities. Human secretory phospholipase A2 (PLA2). The gene encoding it and antibodies against it are useful for the diagnosis and treatment of secretory PLA2-associated diseases e.g. septic shock, trauma, pancreatitis, allergic rhinitis and chronic rheumatoid arthritis. ```

The present invention describes an isolated nucleic acid molecule, which comprises the sequence of any of the genes that are up-regulated or down-

```
acute lymphocytic leukemia). ACC72681 to ACC72880 represent cancer related gene mucleotide sequences which encode the proteins given in ABR58521 to ABR58709. Also described: (1) determining the presence or absence of a pathological cellin a patient; (2) an expression vector comprising a nucleic acid molecule described above; (3) a host cell comprising the vector; (4) an isolated polypeptide, which is encoded by the nucleic acid; (5) an antibody that specifically binds the polypeptide of (4); (6) specifically targeting a compound to a pathological cell in a drug screening assay. The nucleic acid is useful as dispussing a pathology, e.g. cancer (e.g. cancer of the bone marrow, the rapeutic targets. In particular, the nucleic acid is useful for banceas, prostate, skin and uterus), wounds, ischaemia, heart diseases, atherosclerosis and endometriosis. The nucleic acid is also useful in a pathology, particularly for identifying agents for treating these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   131

Gentz RL, Endress GA; Coleman TA, Soppet DR, Moore PA, Ni J, Li Y, Dillon PJ;

WPI; 2001-626394/72. P-PSDB; AAU09096 New human proteins, useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cardiovascular disorders, autoimmune disorders and reproductive disorders.

Claim 1; Page 294; 318pp; English.

that encode them and antibodies raised against them. The proteins,
antibodies and nucleic acids are useful in the diagnosis, prognosis,
antibodies and nucleic acids are useful in the diagnosis, prognosis,
prevention and/or treatment or diseases and/or disorders involving
prevention and/or treatment or diseases and/or disorders involving
construction, gastrointestinal disorders, cardiovascular disorders
(e.g. hypertension, erectile dysfunction, high blood pressure, coronary
cachexia, disorders of small intestine, disorders of reproductive system
(e.g. male infertility and/or impotence), testicular cancer, lung tumours
and other hyperproliferative disorders, disorders of pulmonary system,
central nervous system disorders (e.g. Alzheimer's disease, Parkinson's
disease, Huntington's disease, schizophrenia, mania, dementia, paranoia,
panic disorder, learning disabilities, amyotropic lateral sclerosis,
psychoses, autism, sleep disorders), immune system disorders (e.g. invention relates to novel human proteins (NHP) and the nucleic acids

                                                                                                                                                                                                                   The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, ow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTS) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA

AAM199166 to AAM199904 encode the human proteins given in AAM25225 to
AAM25963. The proteins can have activities based on the tissues and cells
they are expressed in, such as: antiinflammatory; antirheumatic;
antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant;
cardiovascular; antianaemic; antiagregant; haemostatic; vulnerary;
cardiovascular; antianaemic; antiagregant; haemostatic; vulnerary;
antiulcer; osteopathic; dermatological; antiallergic; antiathmatic;
antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic;
cantiparkinsonian; and immunostimulant. The proteins and polynucleotides
cencoding them can be used in gene therapy, antisense therapy and vaccine
production, The proteins and polynucleotides are useful for screening for
cording them can be used in gene therapy, antisense therapy and vaccine
production, The proteins and polynucleotides are useful for screening for
cordisorders associated with the activity of a protein e.g. inflammation,
theumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction,
cheumatodid arthritis, septic shock, pancreatitis, cardiac dysfunction,
infections, autoimmunity, genetic diseases, haematopoietic disorders,

The invention relates to polymucleotides encoding proteins CG122, CG179, CG151, CG162, CG27, CG153 and CG168 which are related to proteins CG95, CG121, CG162, CG27, CG153 and CG168 which are related to proteins involved in lipid metabolism and cardiovascular diseases such as human capolisportetins, lipases and lipoprotein receptor Proteins. These DNA and protein sequences are useful for treating or preventing disorders protein sequences are useful for treating lipid metabolism, cardiovascular diseases and corpression and for treating lipid metabolism, cardiovascular diseases and the presence of or predisposition to a disease associated with altered the presence of or predisposition to a disease associated with altered corpressing Allr proteins are useful for identifying a hardpentic agent expressing Allr proteins are useful for identifying a hardpentic agent corpressing Allr proteins are useful for identifying a hardpentic of physiological interactions of this polypeptide. Vectors comprising these physiological interactions of this polypeptide. Vectors comprising these corpressing Allr sequences are also useful for producing Allr proteins. The mutaneous comprising Allr proteins corpressing and protein sequences of this polypeptide. Vectors comprising these corpressing and protein sequences are also useful for producing Allr proteins. The meaning and crebral artery thrombosis and crebral artery thrombosis or intracardiac corpressing themselves artery thrombosis and stroke. The nucleotides of the invention are used in gene therapy. The present sequence is human CG95 (or C870) lipase DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               143

The present invention describes human secretory phospholipase A2 (PLA2). PLA2 has antiallergic, antiinflammatory, antibacterial, tranquillser, immunosuppressive, vulnerary, antirheumatic and antiarthritic activities. Human secretory phospholipase A2 (FLA2), the gene encoding it and antibodies against it are useful for the diagnosis and treatment of secretory PLA2-associated diseases e.g. septic shock, trauma, pancreatitis, allergic rhinitis and chronic rheumatoid arthritis. The present sequence encodes mouse PLA2, which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  62 AIGGCIGGIGTICCAAICCAGGCGGGAICCIGAACCIGAACAAGAIGGICAAGCAA 121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents cDNA encoding a mouse secreted phospholipase A2 (secreted PLA2). This was initially identified in an EST (expressed sequence tag) database, and a fragment (AAA72077) was isolated from CDNA derived from several mouse tissue types using primers AAA72078-A72081.
The full length cDNA was generated with primers AAA72078-A72081. Invention relates to the novel secreted PLA2, nucleic acids encoding it, and variants of the protein which retain phospholipase A2 activity. It also encompasses an expression vector and host cells comprising DNA encoding murine secreted PLA2, a method for the recombinant production of the protein, a method of screening potential inhibitors of the protein and the compounds thus identified, and an antibody specific for murine PLA2. The antibody can be used for the diagnosis of a variety of diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                365

The present invention describes nucleic acids encoding PRO polypeptides useful for preventing, diagnosing and treating diagnosing a cardiovascular, endothelial or angiogenic disorder in mammals by modulating cell proliferation, angiogenesis and cardiovascularisation, and for identifying agonists and antagonists of these processes. The nucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PRO expression such as cardiovascular, endothelial or angiogenic disorders in mammals (e.g. atherosclerosis, cancers and cardiac hypertrophy. For example, the nucleic acids (NCs) and vectors containing them and the PRO polypeptide may be used to treat disorders associated with decreased PRO expression. AAA77510 to AAA7721 and AAB2438B to AAB24435 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         diagnosing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; PRO; promotion; inhibition; angiogenesis; cardiovascularisation; diagnosis; trauma; wound; cancer; atherosclerosis; cardiac hypertrophy; angiogenic; proliferative; cardiant; cardiovascular; antiatherosclerotic; cytostatic; gene therapy; vaccine; ss.
Nucleic acids encoding PRO polypeptides useful for preventing, diagnand treating diagnosing a cardiovascular, endothelial or anglogenic disorders in mammals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Paoni NF;

The present invention relates to secreted and transmembrane proteins. These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. They may also be used used to generate either transgenic animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy

AAS21244-AAS21518 encode for novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to link bioactive molecules to cells expressing PRO polypeptides, to modulate biological activities of cells expressing PRO polypeptides, and to detect the presence of mammalian lung, colon, colon, properide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour of heorosis factor-alpha (TNP-alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation or apen expression in periosis factor eels; the release of proteoglycans from cartilage, the release of proteoglycans from cartilage, the cells, the release of proteoglycans from cartilage, the coloriferation of inner ear utricular supporting cells or of T-coloriferation of inner ear utricular supporting cells or of T-coloriferation of inner ear utricular supporting cells or of T-coloriferation of monocytes (PBMCS), or the proliferation of endothelial cells. Some of the PRO colypeptides may modulate glucose or free fatty acid uptake by skeletal colypeptides may modulate glucose or free fatty acid uptake by skeletal colypeptides can be used in assays to identify molecules involved in binding interactions. The prolymucleotides encoding PRO colypeptides can be used to generate probes, antisense RNA/DNA, transgenic or knock out animals and can be used in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Isolated , secretory and transmembrane PRO polypeptide used to detect other PRO polypeptides, link bioactive molecules to cells expressing PRO polypeptides, and detect the presence of mammalian tumors e.g. lung,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Deforge L, Desnoyers L, Filvaroff E, G
